## EXECUTIVE SUMMARY

## EXECUTIVE SUMMARY

National Electric Power Regulatory Authority (NEPRA) is the sole regulator of power sector in Pakistan. Provision of safe, reliable, efficient and affordable electric power to the electricity consumers is an integral part of NEPRA's regulatory regime.

NEPRA has framed the Performance Standards (Transmission) Rules 2005 (PSTR)<sup>1</sup> in order to encourage safe, efficient and reliable transmission service. Under PSTR, a transmission licensee is required to submit to NEPRA an Annual Performance Report (APR) in a manner as prescribed in PSTR. NEPRA analyzes these performance reports in light of the performance parameters such as System Duration of Interruption, System Frequency of Interruption, Energy Not Served (ENS), Loss of Supply Incidents along with its financial impact, System Disturbances (if any), Voltage and Frequency Violation Limits prescribed under the PSTR, and Highest and Lowest Voltage Recorded at National Transmission & Despatch Company (NTDC) 500 kV and 220 kV grid stations under Normal system conditions.

The APRs for the year 2020-21, submitted by NTDC and K-Electric have been reviewed on the basis of above-mentioned parameters. Highlights of the analysis/findings are given in succeeding paras: -

<sup>1</sup> Under section 46 of the Regulation of Generation, Transmission and Distribution of Electric Power Act 1997 (XL of 1997), read with section 7 (2) (c) and section 34 thereof, the National Electric Power Regulatory Authority, with the approval of Federal Government, has made the Performance Standards (Transmission) Rules (PSTR) notified vide S.R.O 1138(I)/2005 dated 15<sup>th</sup> November, 2005.

## PERFORMANCE OF NTDC

### System Duration of Interruption

System duration of interruption is a reliability indicator that measures the average outage duration that an interconnection point observes in a year. The interruption was witnessed around 0.13 hours (8 minutes) in the year 2020-21 maintaining the status quo situation.

### System Frequency of Interruption

System frequency of interruption is a reliability parameter that measures the average number of outages per circuit in a year. During 2020-21 the average number of outages per circuit for NTDC remained 0.11, showing a decrease of 8.3% over the previous year i.e. 0.12.

### Energy Not Served (ENS)

In order to gauge system security, the estimates of total ENS during the year as reported by the licensees have been analyzed. The total ENS as reported by NTDC in 2020-21 is **130.2 million kWh** that indicates around 652% increase over the previous year i.e. 17.3 million kWh. Based on the capacity charge<sup>2</sup>, the financial impact amounts to around **Rs. 888 million**.

<sup>2</sup> Capacity charge = Rs. 6.82/kWh.

## Loss of Supply Incidents

**N**TDC reported 57 loss of supply incidents during the year 2020-21 which

translates into total duration of 66.4 hours. The average ENS per incident along with duration and subsequent financial impact has been assessed in the following table.

▼ Description / Unit / Year ►	Unit	2016-17	2017-18	2018-19	2019-20	2020-21
Loss of Supply Incidents	Nos.	165	142	66	62	57
Average ENS per Incident	Million kWh	0.454	3.3	1.7	0.3	2.3
Average Duration per Incident	Hrs : Min	03 : 07	02 : 06	02 : 24	01 : 06	01 : 12
Financial Impact per Incident	Rs. (Million)	2.5	17.5	9.7	1.4	15.6

## Major System Disturbances

**A**s reported by NTDC, these outages include 6 major disturbances in the year

2020-21. The details are summarized below: -

S. No.	Date	Loading at Interruption time	Duration of Interruption	Remarks
1	23-Aug-2020	345 MW	1 Hr & 44 min	500/220 kV, 450 MVA Auto Transformer T-1, T2 & T3 were affected.
2	23-Aug-2020	110 MW	2 Hrs & 10 min	220 kV Guddu-Shikarpur circuit # 01 & 02, 220 kV Guddu-Sibbi circuit affected.
3	09-Jan-2021	10311 MW	20 Hrs	<b>Major System Blackout</b> 500 kV circuits Guddu – Shikarpur 1, Guddu – Shikarpur 2, Guddu – D.G. Khan, Guddu – Muzaffargarh, Guddu – 747 and 500/220 kV, 450 MVA T-2 Transformer at Guddu were affected.
4	29-Apr-2021	590 MW	31 min	<b>Tripping of KAPCO Power Plant and associated transmission lines</b> 220 kV Muzaffargarh Phase-I – KAPCO circuit 1 along with 220 kV Bus Bar 2 at Kapco, 220 kV circuits KAPCO – Multan 4, KAPCO – Multan 5 and KAPCO – Multan 6 tripped.
5	22-May-2021	2097 MW	35 min	<b>Tripping of lines and tower collapse of 500kV Port Qasim – Matiari Circuit 1 &amp; 2</b> 220 kV circuits NIKI – Baldia, NIKI – KDA, and 500 kV circuits NIKI – Jamshoro, Dadu – Matiari, Dadu – Jamshoro and Matiari – Port Qasim circuit 1 & 2 were affected.
6	25-May-2021	850 MW	17 min	<b>Tripping at 220kV TPS Muzaffargarh (Phase-I) and associated transmission lines</b> 220 kV circuits Muzaffargarh Phase-I – Multan 4, Muzaffargarh Phase-I – Muzaffargarh Phase-II, Muzaffargarh Phase-I – Bahawalpur 2, Muzaffargarh Phase-II – Pakgen, Muzaffargarh Phase-I – Lalpir 1, Muzaffargarh Phase-II – Lalpir 2 and 220 kV Bus Bar 1 & 2 at Muzaffargarh Phase-I and 500/220 kV Transformer T1 at 500 kV Muzaffargarh tripped.

## Voltage Violations

**N**EPRAs has prescribed limits for voltage variations in PSTR. Number of voltage violations for NTDC remained 120,092 for the year 2020-21 that indicate 19.5% decrease as compared to 149,130 violations in the preceding year.

### Highest and Lowest Voltage Recorded Under Normal System Condition

**T**he highest voltage recorded beyond permissible limits at 500 kV voltage class was 560 kV for time duration of 60 minutes,

recorded at D. G. Khan. The voltage of 560 kV shows approximately 6.7% variation with respect to allowed limit ( $\pm 5\% = 525/475$  kV). Detail is given in section 3.3.1 (figure 3.15).

**S**imilarly, at 220 kV level, highest voltage was 252 kV recorded at Dharki for time duration of 120 minutes. Voltage of 252 kV indicates approximately 9.1% variation with respect to allowed limit ( $+5\% = 231$  kV). Detail of highest voltage incidents is given in section 3.3.1 (figure 3.16). Grid stations with highest voltage incidents are given below: -

S. No.	Name of Grid Station	Highest Voltage Recorded (kV)	Duration of Variation (min)	Variation w.r.t Allowed Limit (%)
1	220 kV Dharki	252	120	9.1%
2	220 kV Lal Sohanra 220 kV Khuzdar	250	60	8.2%
3	220 kV University 220 kV Jhimpir	249	120 60	7.8%
4	220 kV Muzaffargarh	248	60	7.4%
5	220 kV Rohri	247	120	6.9%
6	220 kV Sibbi 220 kV T. M. Khan	245	60	6.1%
7	220 kV Bannu 220 kV Samundri Road	241	60 210	4.3%
8	220 kV ISPR	240	240	3.9%
9	220 kV Burhan 220 kV Nowshera 220 kV Mansehra	238	180 180 60	3.0%

**O**n the lower side, the voltage remained as low as 173 kV that indicates 17.2% variation with respect to allowed limit ( $-5\% = 209$  kV) which may affect the consumer

end voltages and consequently equipment damage. Grid stations with lowest voltage incidents are given hereunder: -

S. No.	Name of Grid Station	Highest Voltage Recorded (kV)	Duration of Variation (min)	Variation w.r.t Allowed Limit (%)
1	220 kV Kala Shah Kaku	173	90	17.2%
2	220 kV Sarfaraznagar	176	210	15.8%
3	220 kV Quetta 220 kV Sialkot	180	60 330	13.9%
4	220 kV Toba Tekh Singh 220 kV New Shalamar	182	540 120	12.9%
5	220 kV Shahibagh	184	120	12%
6	220 kV New Kot Lakhpat 220 kV Gakkhar 220 kV Mardan	185	90 60 60	11.5%

S. No.	Name of Grid Station	Highest Voltage Recorded (kV)	Duration of Variation (min)	Variation w.r.t Allowed Limit (%)
7	220 kV Gujrat	189	60	9.6%
8	220 kV WAPDA Town 220 kV Chakdara	190	90 90	9.1%
9	220 kV Ravi	192		
10	220 kV Chishtian	194	120	7.2%
11	220 kV Okara 220 kV ISPR	195	1440 60	6.7%
12	220 kV Kassowal 220 kV Bund Road Lahore	197	60 90	5.7%
13	220 kV Mansehra	198	50	5.3%
14	220 kV Nowshera	200	60	4.3%

In order to diagnose the root cause of low voltage, monitoring activities are carried out by NEPRA on regular basis to avoid any undesirable condition on the system and ensure continuity and stability of supply to the electricity consumers of Pakistan.

### Frequency Violations

EPRA has prescribed limits for frequency variations under the Rules.

The frequency data as reported by NTDC indicated variation in frequency limits beyond the upper permissible limit of 50.5 Hz and highest frequency recorded was 50.72 Hz that comes out to be 1.4% variation against the allowed limit of 1% in the year 2020-21. However, NTDC has violated the prescribed limits 4 times which shows improvement in comparison to the preceding year. Detail is given below: -

▼ Description / Unit / Year ►	Unit	2016-17	2017-18	2018-19	2019-20	2020-21
Number of times Frequency remained outside the Limits in a Year	In a year	35	25	25	9	4
	Average/month	2.9	2.1	2.1	0.8	0.3
	Average/day	0.096	0.068	0.068	0.024	0.01
Time duration the Frequency remained outside the Limits in a Year	Days	0.18	0.17	0.12	0.03	0.02
	Hours	4.2	4.1	2.98	0.8	0.6
	%age of year	0.048	0.047	0.034	0.009	0.007
Maximum continuous period of Deviation	Hours	0.25	0.18	-	-	-
	Minutes	15	11	-	-	-

### Conclusion

Light improvement has been shown by NTDC in reliability indicator 'system frequency of interruption' whereas, the Energy Not Served (ENS) has increased by 652% in 2020-21 as compared to preceding year. The voltage violations have been lowered by 19.5% however, low

voltage profile is still a question mark and NTDC needs to improve its functions of planning, operation, protection, augmentation & expansions and rehabilitation to overcome these issues.

## PERFORMANCE OF K-ELECTRIC

### System Duration of Interruption

**S**ystem duration of interruption was witnessed on average around 0.06 Hours (4 minutes) which shows a decrease of 50% as compared to preceding year's average of 0.12 Hours (7 minutes).

### System Frequency of Interruption

**S**ystem frequency of interruption was observed on average around 0.02 number of outages per circuit. It indicates a decrease of 77% over the previous year i.e. 0.09.

### Energy Not Served (ENS)

**I**n order to gauge system security, the estimates of total energy not served (ENS) during the reported period has been analyzed. The total ENS as reported by KE is 0.685 million kWh. Based on the average energy sale rate of KE<sup>3</sup>, the financial impact of 0.685 million kWh, amounts to approximately Rs. 6.85 million. The detail is given hereunder:-

Description	2016-17	2017-18	2018-19	2019-20	2020-21
Loss of Supply Incidents (Nos.)	10	8	13	3	1
Average ENS per Incident (Million kWh)	0.285	0.323	0.206	0.234	0.685
Average Duration per Incident (Hrs : Min)	00 : 43	00 : 25	00 : 20	00 : 19	00 : 34
Financial Impact per Incident Rs. (Million)	3.65	4.1	2.6	2.2	6.85

<sup>3</sup> KE's average energy sale rate = Rs. 10/kWh.

### Frequency Violations

**K**E has reported none voltage violations under both normal and N-1 contingency conditions. The following figure shows the trend, whereas detailed circuit wise analysis is given at appendix 5.

### System Frequency

**D**uring 2020-21, there was no reportable frequency violation by KE.

### Conclusion

**I**mprovement has been shown by KE in reliability and quality of supply indicators as compared to preceding year.

# I N T R O D U C T I O N

# 1 Introduction

This Performance Evaluation Report (PER) provides information on the performance of the transmission licensees i.e. National Transmission & Despatch Company (NTDC) and K-Electric (KE) as per National Electric Power Regulatory Authority (NEPRA) Performance Standards (Transmission) Rules (PSTR) 2005<sup>4</sup>, based on their reported data for the year 2020-21.

The document, further, takes account of system reliability, security of supply and quality of supply of the transmission network of the licensees during the reported period. Trend analysis in terms of comparison over the last five years has also been provided in this regard.

## 1.1 Reporting Requirement

Pursuant to Rule 9 of the PSTR, the licensee shall submit to the Authority every year, before the 31<sup>st</sup> of August of the succeeding year, an Annual Performance Report (APR). The APR shall contain all relevant information with respect to compliance with these rules during the year, including a statement of comparison with the compliance reporting achieved during the preceding year. The reporting guidelines are provided under Rule 10 of PSTR 2005.

## 1.2 Compliance

Pursuant to Rule 6 of PSTR 2005, the quality of supply shall be measured with reference to system voltage and system frequency. The system voltage and frequency requirements are provided in

Rule 7 and 8 of PSTR 2005 which read as follows:

### Rule 7 of PSTR 2005 (System Voltage)

- 1) *Under normal conditions the voltage variations of plus or minus ±5% of the nominal voltage for voltages of 132kV (where applicable) and above shall be permitted.*
- 2) *Under (N-1) contingency conditions voltage variations of plus or minus ±10% of the nominal voltage for voltages of the 132kV (where applicable) and above shall be permitted.*
- 3) *The criteria for reporting voltage variations outside the limits specified in sub-rules (2) and (3) only apply when the duration of variation exceeds a continuous period of thirty (30) minutes.*

### Rule 8 of PSTR 2005 (System Frequency)

- 1) *The frequency variations of plus or minus ±1% of the nominal frequency of 50 Hertz shall be permitted, i.e. frequency to remain within the frequency limits of 49.50 to 50.50 Hertz at all times.*
- 2) *The criteria for reporting frequency variations outside the limits specified in sub-rule (1) only apply when the duration of the variation exceeds a continuous period of five (5) minutes.*

N T D C

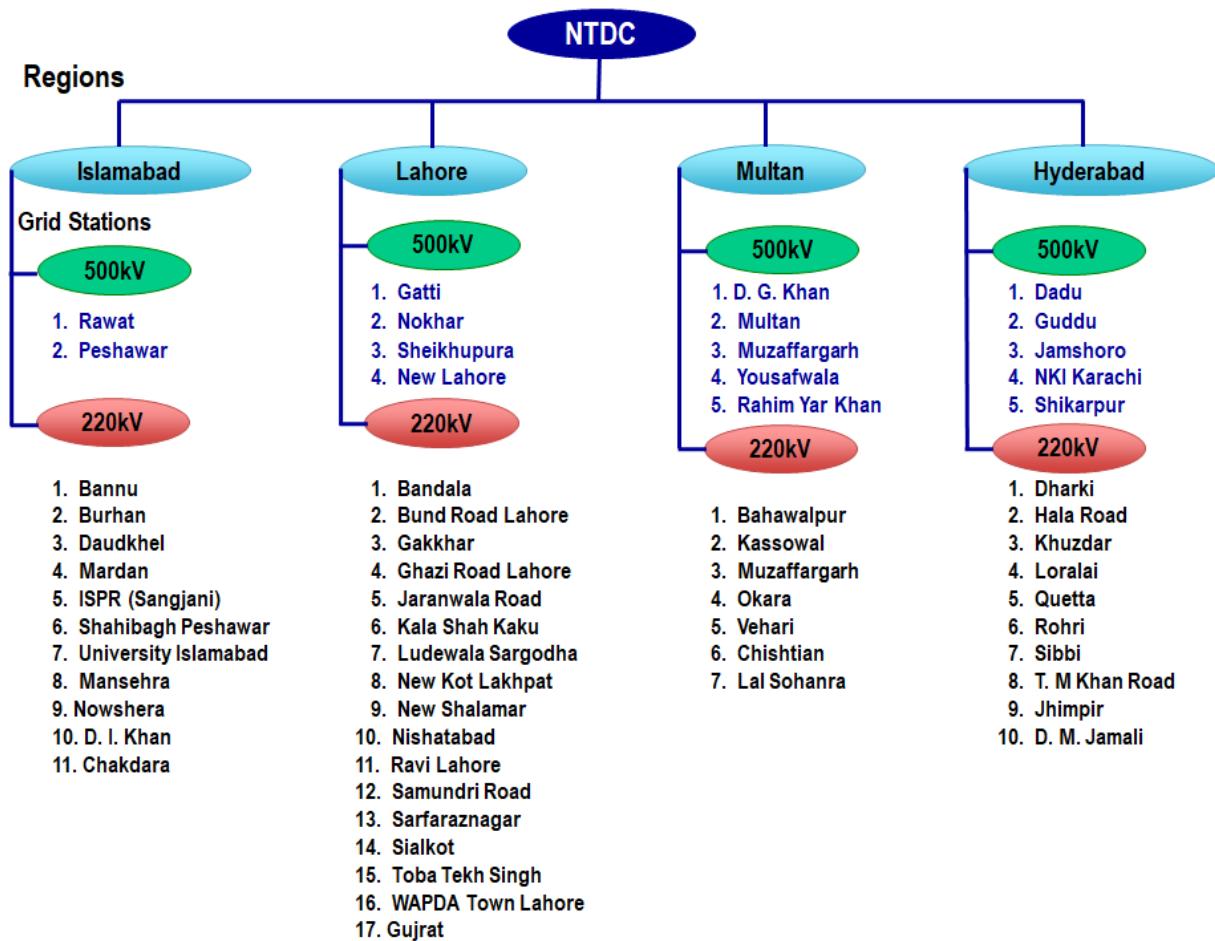

## 2 Brief about NTDC

NTDC was incorporated under the Companies Ordinance 1984 on November 6, 1998 as a result of structural reforms introduced by the Government of Pakistan in the Power Sector. The principal business of NTDC is to own, operate and build infrastructure for transmission system of 220 kV, 500 kV and above transmission Lines and associated Sub-stations.

NTDC commenced its commercial operation on 1<sup>st</sup> of March 1999 and was organized to take over the properties, assets, rights, obligations and liabilities of transmission network all over Pakistan previously owned by Pakistan Water and Power Development Authority (WAPDA), except the area served by K-Electric.

Figure 2.1: NTDC Grid Stations

### 2.1 Licence

NTDC was granted Transmission Licence on 31<sup>st</sup> December 2002 by NEPRA to engage exclusively in the transmission business for a term of thirty (30) years, pursuant to Section 17 of the Regulation of Generation, Transmission and Distribution of Electric Power Act, 1997.

### 2.2 Transmission Network

NTDC operates & maintains sixteen (16) 500 kV and forty-five (45) 220 kV Grid Stations with 8,059 km of 500 kV and 11,438 km of 220 kV transmission lines as of June, 2021. Figure 2.1 shows detail of NTDC transmission system.

Table 2.1: Addition of Grids, Transmission Lines (km) & MVA Capacity

<b>Description</b>		<b>2016-17</b>	<b>2017-18</b>	<b>2018-19</b>	<b>2019-20</b>	<b>2020-21</b>
<b>No. of Grid Stations</b>	500 kV	14	16	16	16	16
	220 kV	38	40	44	45	45
	<b>Total</b>	<b>52</b>	<b>56</b>	<b>60</b>	<b>61</b>	<b>61</b>
<b>Length of Transmission Line (Circuit km)</b>	500 kV	5,253	5,772	5,970	7470	8059
	220 kV	9,814	10,753	11,322	11281	11438
	<b>Total</b>	<b>15,067</b>	<b>16,525</b>	<b>17,292</b>	<b>18,751</b>	<b>19,497</b>
<b>Transformation Capacity (MVA)</b>	500 kV	18,624	20,850	22,350	24000	30610
	220 kV	25,660	28,610	31,060	31900	25770
	<b>Total</b>	<b>44,284</b>	<b>49,460</b>	<b>53,410</b>	<b>55,900</b>	<b>56,380</b>

During review of annual performance report of NTDC it has been observed that no 500 kV grid station exist in the province of Balochistan. Currently five 220 kV grid stations i.e. 220 kV Quetta, Sibbi, Khuzdar, Loralai and Dera Murad Jamali grid stations are operational in Balochistan. However, it is noteworthy to mention that 220 kV Quetta and Sibbi grid stations are suffering from constraints since 2017 thereby voltages as low as 180 kV are observed on these grid stations. The proposed way forward by NTDC includes augmentation of transformers at these grid stations and construction of two 220 kV grid stations namely Zhob and Mastung with expected completion timelines of 2022-23 and 2023-24 respectively.

Gwadar area is also of vital importance, however, it is pertinent to highlight that 132 kV grid of Makran/Gwadar is not connected with the national grid and is being fed from Iran through 132 kV transmission line as per tariff determination of NTDC for the years 2019-20, 2020-21 & 2021-22.

The aforesaid determination also highlights NTDC's concept clearance paper for connection of Makran/Gwadar grid with NTDC network through 220 kV transmission lines from Khuzdar to

Gwadar via Punjgur in year 2025 & onwards with estimated cost of Rs. 30 billion. Accordingly, the Authority has directed NTDC to submit a comprehensive plan along with clear timelines for completion of the aforesaid lines in next petition along with the progress details.

## 2.3 Performance at a Glance

An overview of the performance of NTDC is given hereunder in light of the reported data;

### System Reliability

#### Average Duration of Interruption

1. Total outages hours recorded at all interconnection points (excluding 132 kV line tripping) = **66.4 Hrs**
2. Total number of interconnection points = **520**
3. System duration of interruption =  $66.4 \div 520 = 0.13 \text{ Hrs}/\text{point}$  i.e. **8 min.**

*Maintained status quo position.*

#### Average Frequency of Interruption

1. Total number of outages recorded at all 132 kV outgoing circuits (excluding 132 kV line tripping) = **57**
2. Total number of 132 kV circuits = **520**
3. System frequency of interruption =  $57 \div 520 = 0.11 \text{ Nos./circuit}$

*Indicates 8.3% decrease over the previous year i.e. **0.12 Nos./circuit***

### System Security

#### Energy Not Served (ENS)

1. Total ENS = **130.2 Million kWh**
2. Number of incidents, where there has been a loss of supply = **57**
3. Average ENS per incident = **2.3 Million kWh**
4. Average duration per incident =  $66.4 \div 57 = 1.2 \text{ Hrs (1 Hr & 12 min)}$
5. Financial impact of ENS = **Rs. 888 Million**
6. Financial impact per incident =  $888 \div 57 = \text{Rs. 15.6 Million.}$

*ENS of 130.2 Million kWh indicates around 652% increase over the previous year i.e. 17.3 Million kWh.*

*Rs. 888 Million indicates 932% increase than the previous year's impact of Rs. 86 Million.*

### Quality of Supply

#### Voltage

1. Total number of violations under normal conditions = **119,755**
2. Total number of violations under N-1 conditions = **337**
3. Total number of violations under Normal & N-1 conditions = **120,092**
4. Highest voltage recorded under normal conditions; @500 kV level: **560 kV** for 60 min. at D.G Khan; @220kV level: **252 kV** for 60 min. at Dharki.
5. Lowest voltage recorded under normal conditions; @220kV level: **173 kV** for 90 min. at Kala Shah Kaku.

*Violations of 120,092, indicates 19.5% decrease over the previous year's 149,130.*

### Frequency

1. Number of times frequency remained outside the limits in a year = **4**
2. Time duration the frequency remained outside the limits in a year = **35 min.**
3. %age time of the year the frequency remained outside the limits = **0.007% time of the year.**

4. Highest frequency recorded = **50.72 Hz**
5. No violation at lower end.

*Allowable limits: 49.5 Hz – 50.5 Hz*

### 3 Analysis of NTDC's Annual Performance Report (APR)

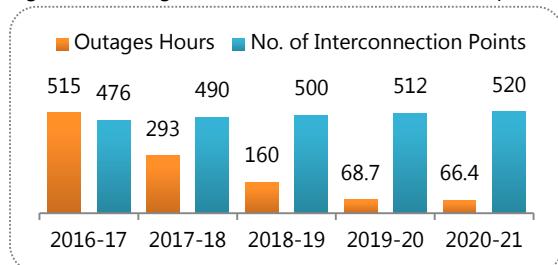

The Annual Performance Report submitted by NTDC has been analyzed in light of the PSTR 2005. The detail is given hereunder;

#### 3.1 System Reliability

##### 3.1.1 System Duration of Interruption

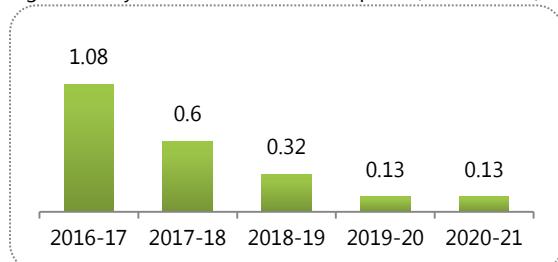

The total outages hours recorded at all interconnection points are 66.4 during the reported period, indicating a 3.4% decrease in comparison to the preceding year's 68.7 hours. Similarly, 08 number of interconnection points have been added to the system resulting into 520 in total. The same has been shown in figure 3.1.

Figure 3.1: Outages hours & No. of interconnection points

The average duration of interruption per interconnection point during the reported period remained 0.13 hours (8 minutes). This indicates that NTDC has maintained status quo position. The same has been shown in figure 3.2.

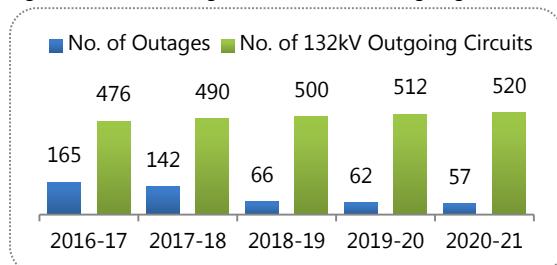

Figure 3.2: System duration of interruption (Hours/Point)

##### 3.1.2 System Frequency of Interruption

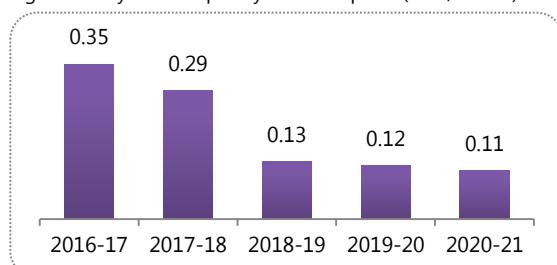

The total number of outages remained 57 in the year 2020-21 that shows a reduction of around 8.1% as compared to preceding year's 62 outages as shown in the flowing figure.

Figure 3.3: No. of outages & No. of 132kV outgoing circuits

Average number of interruptions per circuit during the reported period remained 0.11 indicating 8.3% improvement in comparison to the preceding year's 0.12 as shown in figure 3.4.

Figure 3.4: System frequency of interruption (Nos./Circuit)

### 3.2 System Security

In order to gauge system security, the estimates of total energy not served (ENS) during the reported period has been analyzed. The total ENS as reported by NTDC is 130.2 million kWh. Based on the capacity charge<sup>5</sup>, the financial impact of 130.2 million kWh, amounts to approximately Rs. 888 million. The detail is given hereunder;

Figure 3.5: Reported ENS

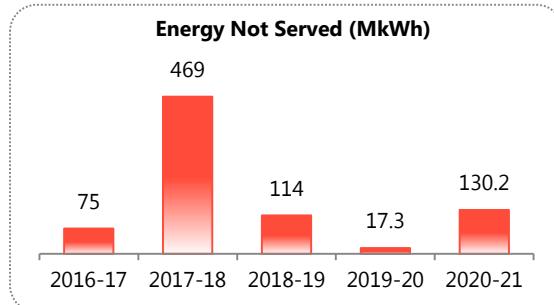

Figure 3.6: Loss of supply incidents & duration per incident

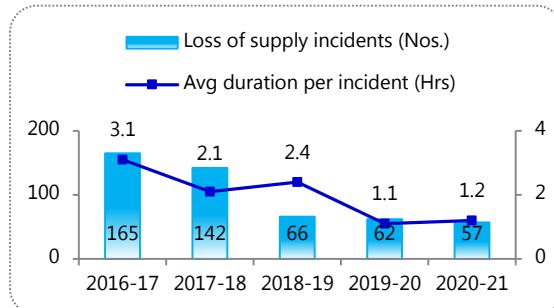

Figure 3.7: Loss of supply incidents along with average

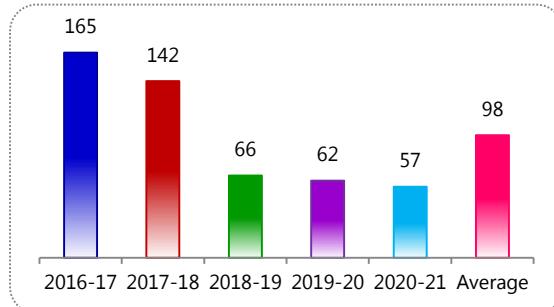

Figure 3.8: Region wise loss of supply incidents

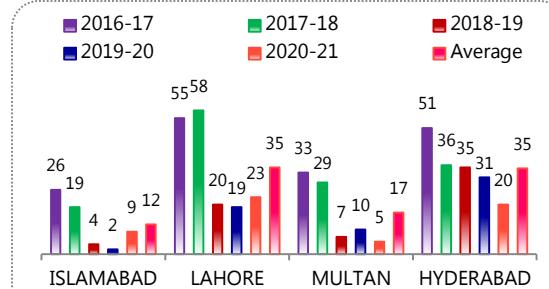

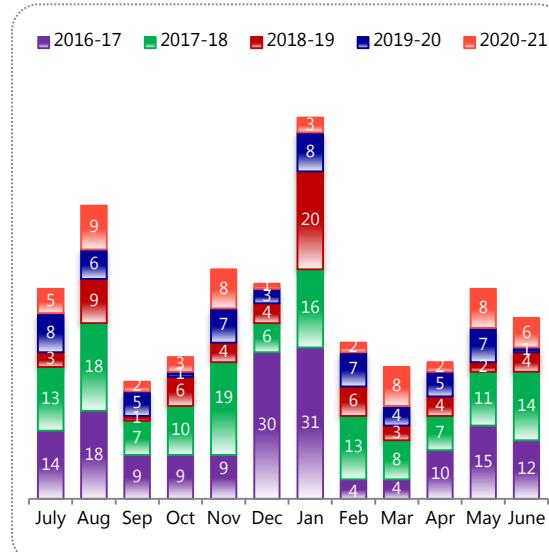

Figure 3.9: Seasonal trend of loss of supply incidents

<sup>5</sup> Capacity charge = Rs. 6.82/kWh.

Table 3.1: Loss of supply incidents, average ENS, duration & financial impact per incident

▼ Description / Unit / Year ►	Unit	2016-17	2017-18	2018-19	2019-20	2020-21
Loss of Supply Incidents	Nos.	165	142	66	62	57
Average ENS per Incident	Million kWh	0.454	3.3	1.7	0.3	2.3
Average Duration per Incident	Hrs : Min	03 : 07	02 : 06	02 : 24	01 : 06	01 : 12
Financial Impact per Incident	Rs. (Million)	2.5	17.5	9.7	1.4	15.6

### 3.2.1 Major System Disturbances

As reported by NTDC, these outages include 6 major disturbances in the year 2020-21. The detail is summarized below: -

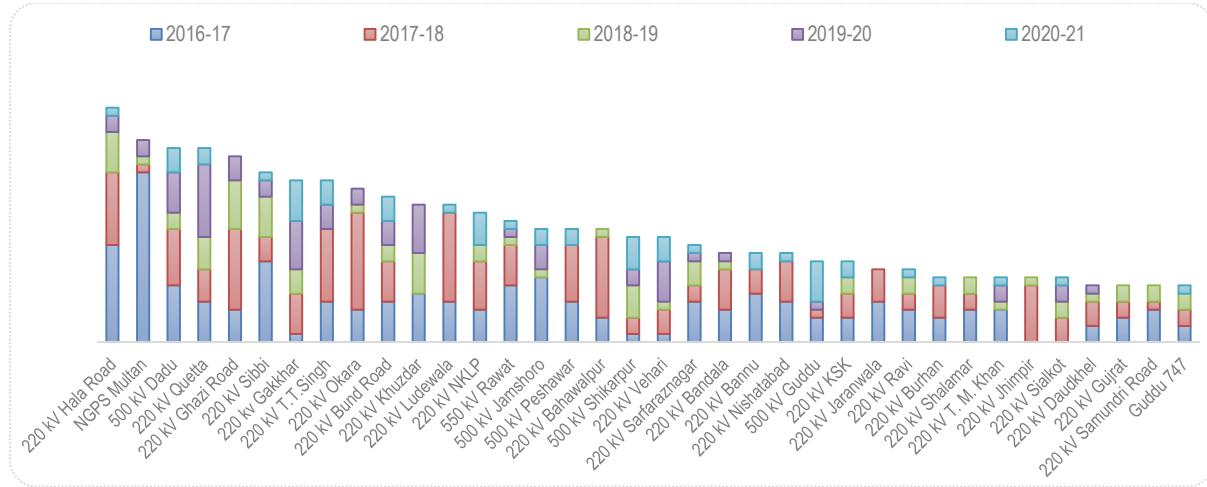

Table 3.2: Major system disturbances

S. No.	Date	Loading at Interruption time	Duration of Interruption	Remarks
1	23-Aug-2020	345 MW	1 Hr & 44 min	500/220 kV, 450 MVA Auto Transformer T-1, T2 & T3 were affected.
2	23-Aug-2020	110 MW	2 Hrs & 10 min	220 kV Guddu-Shikarpur circuit # 01 & 02, 220 kV Guddu-Sibbi circuit affected.
3	09-Jan-2021	10311 MW	20 Hrs	<b>Major System Blackout</b> 500 kV circuits Guddu – Shikarpur 1, Guddu – Shikarpur 2, Guddu – D.G. Khan, Guddu – Muzaffargarh, Guddu – 747 and 500/220 kV, 450 MVA T-2 Transformer at Guddu were affected.
4	29-Apr-2021	590 MW	31 min	<b>Tripping of KAPCO Power Plant and associated transmission lines</b> 220 kV Muzaffargarh Phase-I – KAPCO circuit 1 along with 220 kV Bus Bar 2 at Kapco, 220 kV circuits KAPCO – Multan 4, KAPCO – Multan 5 and KAPCO – Multan 6 tripped.
5	22-May-2021	2097 MW	35 min	<b>Tripping of lines and tower collapse of 500kV Port Qasim – Matiari Circuit 1 &amp; 2</b> 220 kV circuits NKI – Baldia, NKI – KDA, and 500 kV circuits NKI – Jamshoro, Dadu – Matiari, Dadu – Jamshoro and Matiari – Port Qasim circuit 1 & 2 were affected.
6	25-May-2021	850 MW	17 min	<b>Tripping at 220kV TPS Muzaffargarh (Phase-I) and associated transmission lines</b> 220 kV circuits Muzaffargarh Phase-I – Multan 4, Muzaffargarh Phase-I – Muzaffargarh Phase-II, Muzaffargarh Phase-I – Bahawalpur 2, Muzaffargarh Phase-II – Pakgen, Muzaffargarh Phase-I – Lalpir 1, Muzaffargarh Phase-II – Lalpir 2 and 220 kV Bus Bar 1 & 2 at Muzaffargarh Phase-I and 500/220 kV Transformer T1 at 500 kV Muzaffargarh tripped.

Table 3.3: Locational trend of loss of supply incidents

S. No.	Grid/ Plant Name	2016-17	2017-18	2018-19	2019-20	2020-21	Total
1	220 kV Hala Road	12	9	5	2	1	29

<b>Major System Disturbances/Blackouts/Breakdowns/System Splitting(s)</b>							
37	Nos.	10	4	13	5	6	38

Figure 3.10: Locational trend of loss of supply incidents

The above table and figure shows the locational trend of outages over the period of five years. Among which the Hala Road, Guddu, Jamshoro, Dadu, Shikarpur and Gakkhar areas are most vulnerable to frequent outages leading to major system disturbances that often result in major system blackouts, collapses and breakdowns. NTDC needs to improve its functions of planning, operation, protection, augmentation & expansions and rehabilitation so that such disturbances may not occur in future.

Considering the fact that transmission network being the backbone of the country's electric power supply system, the Authority allowed a colossal amount to NTDC under the head of repair & maintenance (R&M) to ensure and attain optimal level of network reliability and sustainability. The detail is given hereunder;

R&M Allowed	Rs. In Millions				
	2016-17	2017-18	2018-19	2019-20	2020-21
947	671	988	655	719	

### 3.3 Quality of Supply

Quality of supply (QoS) is measured with reference to system voltage and system frequency. The analysis of QoS data as reported by the licensee is given in next sub-sections:-

### 3.3.1 System Voltage

The data pertaining to number of voltage violations as submitted by NTDC was analyzed and it was observed that NTDC's performance has improved by 19.5% in the year 2020-21 as compared to preceding year as shown in figure 3.10. Region wise detail of voltage violations is as under;

Figure 3.11: Number of voltage violations (NTDC)

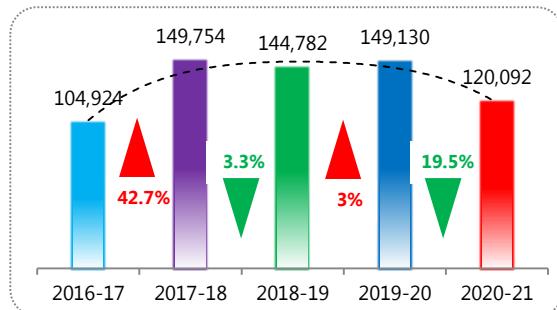

Table 3.4: Number of voltage violations (NTDC Region wise)

System Condition	NTDC Region	2016-17	2017-18	2018-19	2019-20	2020-21

The detailed circuit wise analysis for each region is given at appendix 1 through appendix 4.

Figure 3.16: Highest voltage (kV) recorded at 500 kV grid stations under Normal condition

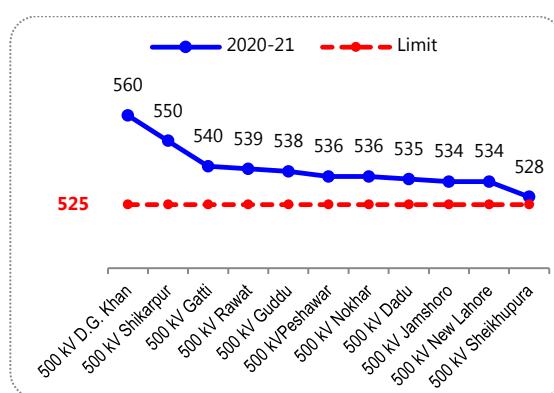

Figure 3.17: Highest voltage (kV) recorded at 220 kV grid stations under Normal condition

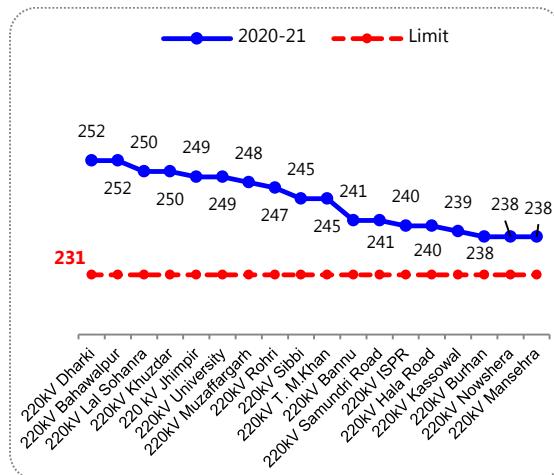

Figure 3.15: Number of voltage violations (NTDC Hyderabad Region)

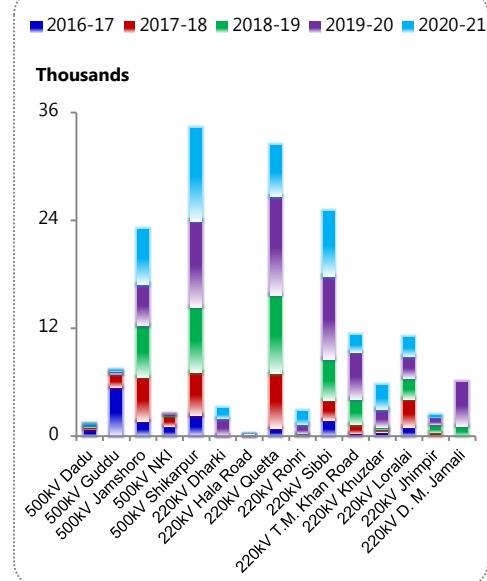

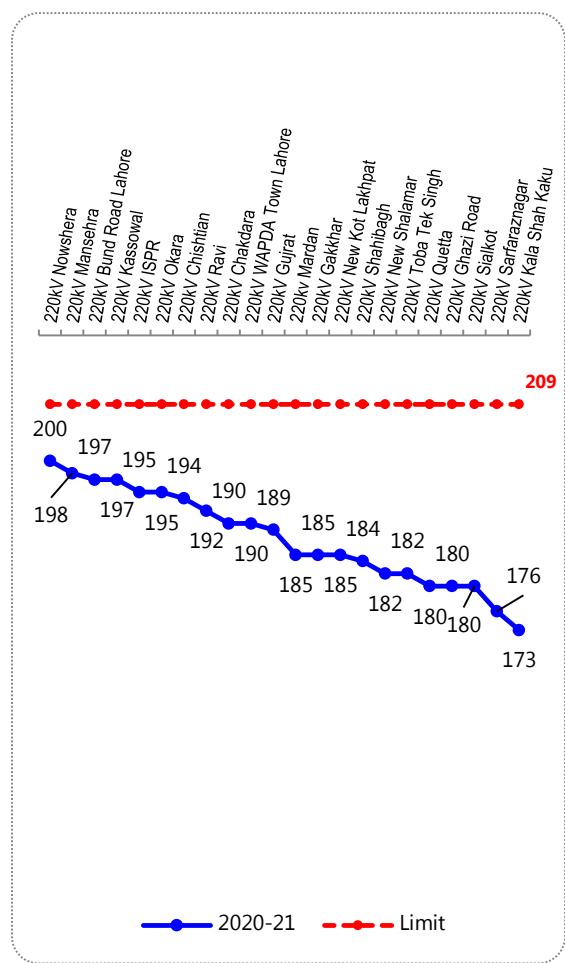

Figure 3.18: Lowest voltage (kV) recorded at 220 kV grid stations under Normal condition

By linking the above-mentioned analysis of voltage violations and voltage profile with system constraints and annual system reliability assessment and

improvement report submitted by NTDC, it has been observed that most of these grid stations are overloaded. The detail is summarized in the following table;

Table 3.9: Linkage with System Constraints and Annual System Reliability and Assessment Report

Note: The percentages indicated in the above table is the ratio of Estimated Peak Sub-station Demand to Transformer Capacity as prescribed in PC 2.2.1 of the Grid Code. If the ratio of Estimated Peak Sub-station Demand to Firm Substation Capacity is 80% (Single Transformer sub-station) or 100% (more than one Transformer sub-station) then the NTDC shall include a description of its plans, together with cost and in-service date, to either add additional transformer capacity or to shift load from/to other substations. Where;

*Firm Sub-station Capacity MVA is the Total Installed Transformer Capacity less the largest transformer based on its Nameplate MVA rating;*

*In the case of single transformer Sub-station, the Firm Capacity of the Sub-station is 80% of Transformer's Nameplate Rating.*

### 3.3.2 System Frequency

The data submitted by NTDC was analyzed and it revealed that a total of 4 times frequency remained outside the

prescribed limits and that comes out to be approximately 0.007% of the reported period. The following table shows statistics of system frequency over the reported period.

Table 3.10: System frequency stats (2020-21)

Month	Number of days/hours for a month over a year		Frequency violation recorded (Hz)		Duration of variation		Variation (%)			Number of times frequency remained outside the limits

## 4 Brief about KE

K-Electric (KE) formerly known as Karachi Electric Supply Company was established on September 13, 1913 under the Indian Companies Act of 1882 as the Karachi Electric Supply Corporation (KESC). The entity was nationalized in 1952 and re-privatized on November 29, 2005. In September, 2008 it was renamed as Karachi Electric Supply Company (KESC). Thereafter, it was rebranded as K-Electric (KE).

### 4.1 Licence

KE was granted Transmission Licence on 10<sup>th</sup> June 2010 by NEPRA to engage in the transmission business within the territory as specified in its license for a term of thirty (30) years, pursuant to Section 17 of the Regulation of Generation

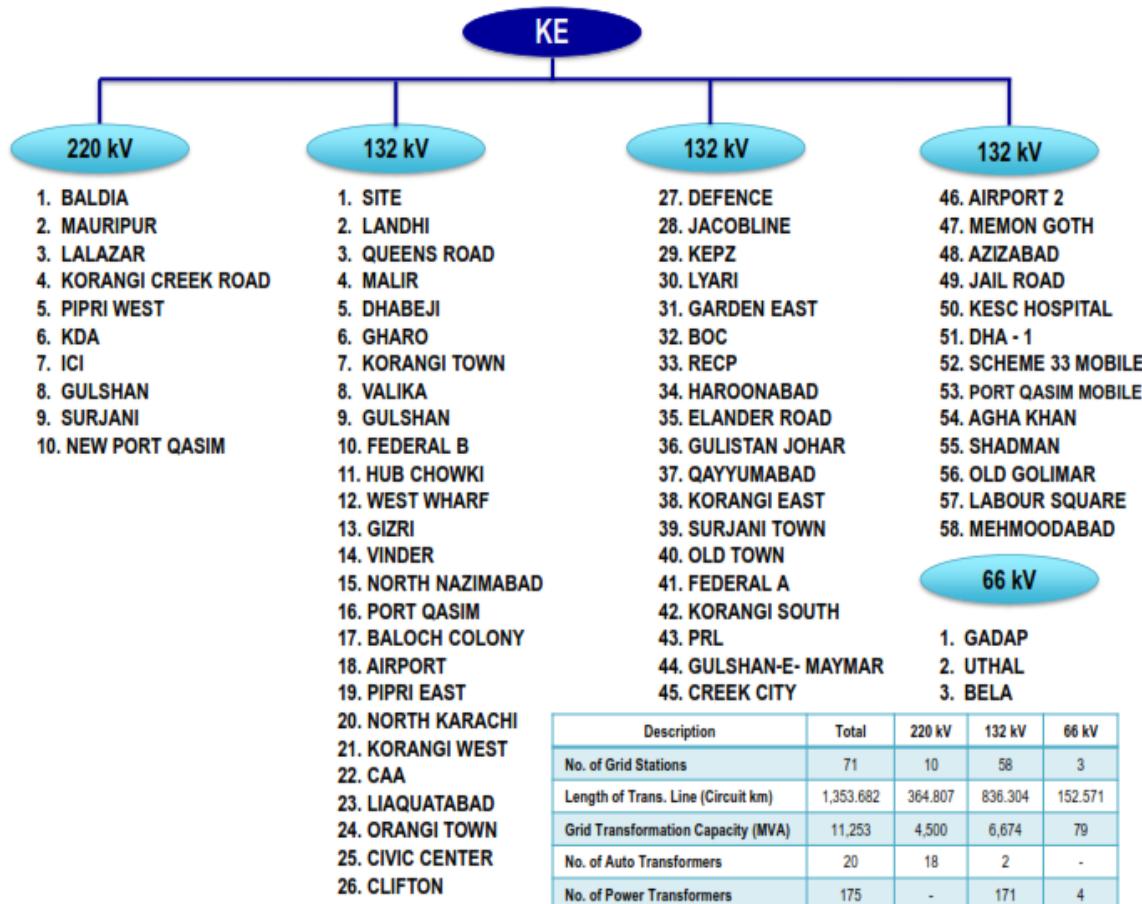

Transmission and Distribution of Electric Power Act, 1997.

### 4.2 Transmission Network

KE's transmission system comprises a total of 1,350 km of 220 kV, 132 kV and 66 kV transmission lines, 71 grid stations, 20 Auto Transformers and 172 power transformers, as of June 2020. K-Electric grid is interconnected with the NTDC grid system through four (04) 220 kV transmission circuits, namely;

- i. KDA-NKI
- ii. Baldia-NKI
- iii. KDA-Jamshoro-1
- iv. KDA-Jamshoro-2

Figure 4.1: KE transmission system

### 4.3 Performance at a Glance

An overview of the performance of KE is given hereunder in light of the reported data;

#### System Reliability

##### Average Duration of Interruption

1. Total outages hours recorded at all interconnection points (excluding 132 kV line tripping) = **0.57 Hrs**
2. Total number of interconnection points = 9
3. System duration of interruption =  $0.57 \div 9 = 0.06 \text{ Hrs}/\text{point}$  i.e. **4 min.**

*Indicates an 50% decrease over the previous year i.e. **0.12 Hrs/point***

##### Average Frequency of Interruption

1. Total number of outages recorded at all 132 kV outgoing circuits (excluding 132 kV line tripping) = **1**
2. Total number of 132 kV circuits = **45**
3. System frequency of interruption =  $1 \div 45 = 0.02 \text{ Nos./circuit}$

*Indicates a 77% decrease over the previous year i.e. **0.09 Nos./circuit***

#### System Security

##### Energy Not Served (ENS)

1. Total ENS = **0.685 million kWh**
2. Number of incidents, where there has been a loss of supply = **1**
3. Average ENS per incident = **0.685 million kWh**
4. Average duration per incident =  $0.57 \div 1 = 0.57 \text{ Hrs (34 min)}$
5. Financial impact of ENS = **Rs. 6.85 Million**
6. Financial impact per incident =  $6.85 \div 1 = \text{Rs. 6.85 Million.}$

*Rs. 6.85 Million indicates 2.2% increase than the previous year's impact of Rs. 6.7 Million.*

#### Quality of Supply

##### Voltage

1. Total number of violations under Normal conditions = **Nil**
2. Total number of violations under N-1 conditions = **Nil**
3. Total number of violations under Normal & N-1 conditions = **Nil**

##### Frequency

As reported, the frequency remained within the limits.

## 5 Analysis of KE's Annual Performance Report (APR)

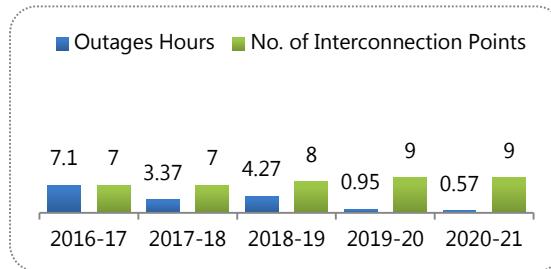

The Annual Performance Report submitted by KE has been analyzed in light of the PSTR 2005. The detail is given hereunder;

### 5.1 System Reliability

#### 5.1.1 System Duration of Interruption

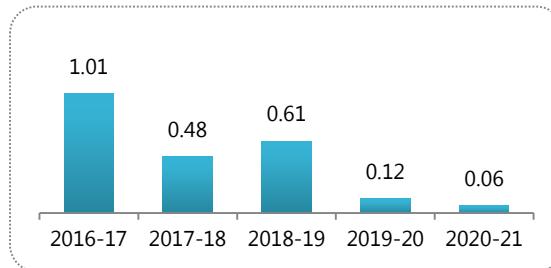

The total outages hours recorded at all interconnection points are 0.57 during the reported period, indicating a 40% decrease in comparison to the preceding year's 0.95 hours. Number of interconnection points remained the same i.e. 9. The same has been shown in figure 5.1.

Figure 5.1: Outages hours & No. of interconnection points

The average duration of interruption per interconnection point during the reported period remained 0.06 hours (4 minutes). This indicates 50% decrease over the previous year i.e. 0.12 hours (7 minutes) as shown in figure 3.2.

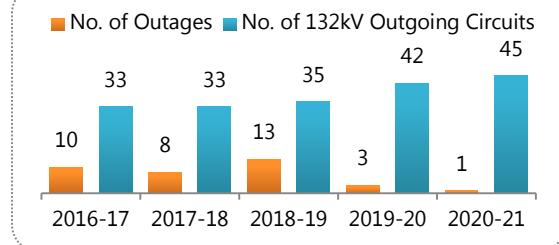

Figure 5.2: System duration of interruption (Hours/Point)

#### 5.1.2 System Frequency of Interruption

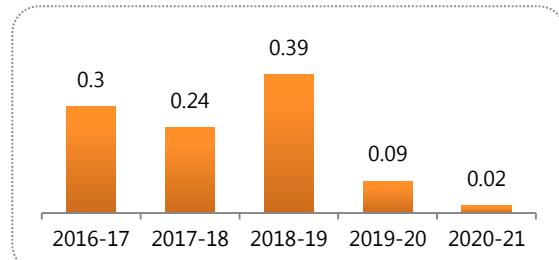

The total number of outages remained 1 in the year 2020-21 that shows a reduction of around 66.7% as compared to preceding year's 3 outages as shown in the flowing figure.

Figure 5.3: No. of outages & No. of 132kV outgoing circuits

Average number of interruptions per circuit during the reported period remained 0.02 indicating 77.8% improvement in comparison to the preceding year's 0.09 as shown in figure 3.4.

Figure 5.4: System frequency of interruption (Nos./Circuit)

## 5.2 System Security

In order to gauge system security, the estimates of total energy not served (ENS) during the reported period has been analyzed. The total ENS as reported by KE is 0.685 million kWh. Based on the average energy sale rate of KE<sup>6</sup>, the financial impact of 0.685 million kWh, amounts to approximately Rs. 6.85 million. The detail is given hereunder: -

Figure 5.5: Reported ENS

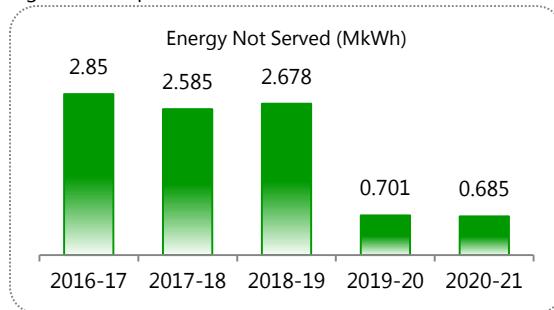

Figure 5.6: Loss of supply incidents & duration per incident

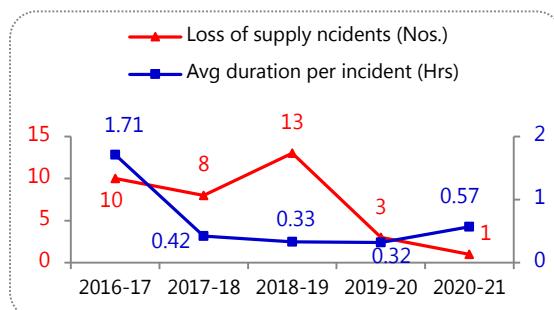

Figure 5.7: Loss of supply incidents along with average

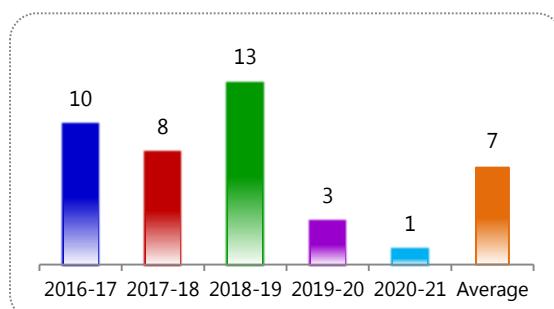

Table 5.1: Loss of supply incidents, average ENS, duration & financial impact per incident

Description	2016-17	2017-18	2018-19	2019-20	2020-21
Loss of Supply Incidents (Nos.)	10	8	13	3	1
Average ENS per Incident (Million kWh)	0.285	0.323	0.206	0.234	0.685
Average Duration per Incident (Hrs : Min)	00 : 43	00 : 25	00 : 20	00 : 19	0.57
Financial Impact per Incident Rs. (Million)	3.65	4.1	2.6	2.2	6.85

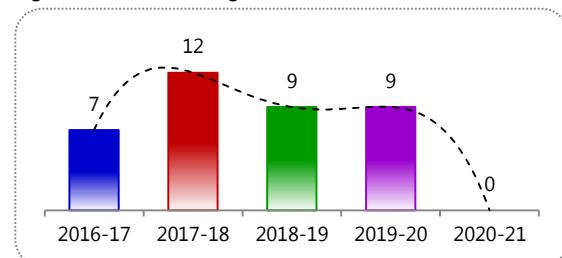

## 5.3 Quality of Supply

Quality of supply (QoS) is measured with reference to system voltage and system frequency. The analysis of QoS data as reported by KE is given hereunder: -

### 5.3.1 System Voltage

KE has reported none voltage violations under both normal and N-1 contingency conditions. The following figure shows the trend, whereas detailed circuit wise analysis is given at appendix 5.

Figure 5.8: No. of voltage violations (KE)

### 5.3.2 System Frequency

During 2020-21, there was no reportable frequency violation by KE.

<sup>6</sup> KE's average energy sale rate = Rs. 10/kWh.
