**Subject: COMPLAINT FILED BY MR. SHAUKAT ALI UNDER SECTION 39 OF THE  
REGULATION OF GENERATION, TRANSMISSION AND DISTRIBUTION OF  
ELECTRIC POWER ACT, 1997 AGAINST FESCO REGARDING DETECTION BILL  
DECISION**

This decision shall dispose of complaint filed by Mr. Shaukat Ali (hereinafter referred to as the "Complainant") against Faisalabad Electric Supply Company (hereinafter referred to as the "Respondent" or "FESCO") under Section 39 of the Regulation of Generation, Transmission and Distribution of Electric Power Act, 1997 (hereinafter referred to as the "NEPRA Act").

2. NEPRA received a complaint from Mr. Shaukat Ali dated nil received in this office on June 06, 2023 wherein the Complainant submitted that he was charged a detection bill by FESCO during May, 2023 and prayed for withdrawal of detection bill. The matter was taken up with FESCO whereby FESCO vide a letter dated June 15, 2023 submitted that a detection bill of 1752 units was charged to the Complainant as the Complainant was found involved in direct electricity theft through LT line & an FIR based on theft has also been registered against the Complainant. In order to analyze the matter, a hearing was held at NEPRA Regional Office, Faisalabad on September 07, 2023 whereby the matter was discussed in detail in attendance of both the parties.

3. Following the hearing, FESCO was directed to defer the disputed amount and a joint site inspection was, later, carried out by NEPRA officials on September 25, 2024 in presence of the Complainant & concerned FESCO officials to ascertain the ground facts. Accordingly, it was observed that video graphic evidence pertaining to direct theft of electricity submitted by FESCO does relate to the Complainant's premises, however, other service cables of some nearby electricity connections also pass over the roof of Complainant's premises. The same

situation also cast suspicion on the act of electricity theft by the Complainant, however, affirm the assistance in commission of the theft by other electricity consumers. It is of note that the circumstantial evidence i.e. degraded & dubious condition of the service cables having several joints used by the Complainant along with the convenient approach to LT line from the roof of premises raises conjecture for theft of electricity also by the Complainant.

4. The case has been examined in detail in light of record made so available by both the parties, arguments advanced during hearing and applicable law. Following has been observed:

- i. The Complainant's electricity connection installed against reference number (02-13254-0100018) located at Chah Wali Dad, Jali Fatyana, Tehsil Tandlianwala, District Faisalabad was charged a detection bill of (1752) units amounting to Rs. 54,906/- by FESCO during May, 2023 on account of the direct theft of electricity through LT line. The dispute raised by the Complainant was that the detection bill has been charged with the mala fide intent without any evidence.
- ii. Perusal of the documentary evidence reveals that the Complainant was charged a detection bill for the period of six months i.e. November, 2022 to April, 2023 on the basis of connected load while the same is consistent with clause 9.1.3 (b) of CSM for charging detection bill against a registered consumer involved in direct theft of electricity as per which FESCO is restricted to charge detection bill for a maximum period of (6) months in the order of priority i.e. previous consumption history etc. as envisaged in the same clause. However, the analysis of detection bill also divulges that the units already charged in routine billing during the detection bill period have not been adjusted by FESCO which is mandatory as per the above mentioned clause.
- iii. Scrutiny of the Complainant's previous electricity consumption for corresponding months of previous year does not provide any clearer context as the connection was only installed during start of the year 2021. Moreover, future consumption during corresponding months of year 2024, as per the available record, remained disputed between both parties lacking reasonable comparison. However, future consumption during the year 2023 remained elevated in comparison with consumption recorded during detection period. Furthermore, the videographic evidence correlated with the circumstantial evidence checked during site inspection as narrated above, is primed on fact that the roof of Complainant's premises was undisputedly being used as the source of aiding direct theft of electricity for other electricity consumers. The same act of electricity theft is also attributable predominantly to the Complainant as his own premises/roof was critically involved in theft. Moreover, considering the fact that the consumption recorded during detection period also remained unhealthy in comparison with the connected load, implicates the Complainant in the direct theft of electricity.

5. Foregoing in view, the detection bill charged to the Complainant by FESCO is valid, however, the same is to be revised by adjusting the units charged in the routine billing during the detection period i.e. November, 2022 to April, 2023 as per which FESCO is directed to charge only 1383 units instead of 1752 units. Moreover, FESCO is also directed to shift the Complainant's meter on a feasible location in front of his premises along with shifting of all connections installed in the vicinity of Complainant's premises to locations of respective usages to avoid untoward incident in the future. Compliance report be submitted within (10) days.
