- The Authority has considered the SEPCO Tariff Petition for the FY 2018-19 & FY 2019-20 and observed that the Tariff Petition filed by SEPCO is not in accordance with the Amended NEPRA Act 2018 whereby Tariff petition for Supply and Distribution business have to be filed separately vide NEPRA's letter No. NEPRA/R/TRF-100/SEPCO/18906 dated 09-10-2019.
- In view of above SEPCO is resubmitting the Consumer end Tariff Petition Supply Business for the FY 2018-19 and FY 2019-20 in accordance with the Amended NEPRA Act 2018.

1.1.4 Grounds for Petition:

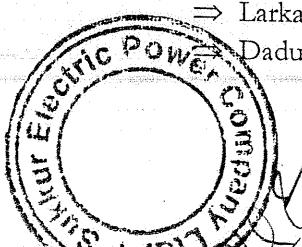

Under the 1997 NEPRA Act, NEPRA is responsible for determining tariffs and other terms and conditions for the supply of electricity by the generation, transmission and distribution companies and to recommend these to the Federal Government, subject to the need to comply with guidelines, not inconsistent with the provisions of the NEPRA Act, as laid down by the Federal Government. NEPRA is responsible for determining the process and procedures for reviewing tariffs and recommending tariff adjustments.

SUKKUR ELECTRIC POWER COMPANY LIMITED (SEPCO) is a licensed public limited company providing utility service to distribute and supply electricity to the area of Sukkur Electric Power Company Limited, as set out in SEPCO's license, granted by NEPRA under the NEPRA Act.

The Distribution System of the SEPCO consists of three operation circles namely:

- ⇒ Sukkur
- ⇒ Larkana

Dadu

Tariff Petition Distribution Power FY 2018-19 & FY 2019-20 (MYT)

In accordance with the requirements of the Company, SEPCO is hereby submitting a petition for the consumer end tariffs in its license area for the fiscal year 2018-19 & 2019-20. This petition is filed in accordance with the NEPRA Tariff Standards and Procedure Rules 1998 Part II Section 3.

1.2 Key Aims and Features of the Petition:

1.2.1 Aims of the Petition:

This tariff petition sets out the tariff methodology, for the required revenues and timetable for rebalancing tariffs in SEPCO's distribution area for the FY 2018-19 & FY 2019-20. The aim of this petition is to obtain approval for the implementation of cost reflective tariff to meet SEPCO's revenue requirement so that the tariffs for each customer category reflect the cost of serving of that customer category.

The implementation of cost reflective tariffs will benefit consumers as well as SEPCO as it will:

- Capable of funding for investment to improve service, quality and reliability.
- Enable the funding of network expansion.
- Provide signals for efficient usage of distribution network and investment.
- Promote the financial sustainability of the Company.

2. Tariff Review Formula and Process:

The tariff formula provides a transparent and predictable way of determining SEPCO's distribution margin on annual basis within the period of control year. A formula is advantageous as it reduces uncertainty for the utility and for customers. It also provides a simple way for NEPRA to incentives the company to reduce losses and/or improve operating efficiencies.

2.1 Tariff Methodology:

2.1.1 SEPCO's Margin:

The formula calculates SEPCO's distribution margin based on projected unit sales, operating expenses, depreciation, investment and return on investment (cost of capital). Generation and transmission costs are treated as pass-through. The formula determines revenues for the period of the tariff control period. Revisions may be made to revenues within that period if actual inflation is different from forecast. The profits or losses that arise from changes in efficiency or demand would, however, be retained by SEPCO for the duration of the revenue control period.

At the end of the period, the formula would be reapplied to determine the distribution margin for each quarter period in the subsequent period of control. Operating expenditures will be subject to an efficiency requirement so that SEPCO will be required to ensure that its increase in costs is below the rate of inflation by an efficiency factor (X) to be determined by NEPRA.

Under the proposed tariff-setting methodology, the average retail tariff would consist of (i) Average Distribution Margin, which would be set on the formula-based methodology of NEPRA (ii) Prior Year Adjustment.

Tariff Petition Distribution Power FY 2018-19 & FY 2019-20 (MYT)

2.2 Distribution Margin Formula:

The average Distribution Margin (DM) for the FY 2019-20 is based on the following formula, keeping in view of the actual results for the FY 2018-19, where ever required.

$$\text{Avg. D.Margin} = \frac{\text{O&M} + \text{Provision for Bad Debts} + \text{Depreciation} + \text{RORB} - (\text{Other income})}{\text{Total Estimated Unit Sales}}$$

Where:

O&M is the expected operating and maintenance cost per kWh, which includes the estimated cost of technical service and repair, necessary materials for operation, salary, mandatory social insurance payments, administration, management and other operating costs related to SEPCO's distribution and supply business. The O&M component for the FY 2018-19 & FY 2019-20 is estimated on the basis of inflation adjustments to SEPCO's operating expenses from the latest available data for FY 2017-18.

2.2.1 Provision for Bad Debts:

The socio-economic condition of the consumers of SEPCO's area of service is very poor. The capability of payment utility bills is weak. The overall recovery position of consumer end-tariff of SEPCO is as under:-

Period	Billing [Rs. In M]	Collection [Rs. In M]	%age of Collection
FY 2018-19	47,570	30,887	65%
FY 2017-18	41,478	24,798	60%
Inc/Dec:	6,092	6,089	5%

The age wise Consumers receivables as on 30th June, 2019 is as under:-

Aging of Accounts Receivables as on 30 th June	[Rs. In M]		
	Actual for ending 30th June, 2018	Provisional for ending 30th June, 2019	for ending 30th June, 2020
Outstanding for current year	Rs In Million	3,751	4,276
Outstanding for more than 1 year	Rs In Million	5,475	5,905
Outstanding for more than 2 years	Rs In Million	4,028	3,955
Outstanding for more than 3 years	Rs In Million	4,364	4,817
Outstanding for more than 4 years	Rs In Million	4,151	4,447
Outstanding for more than 5 years	Rs In Million	70,653	83,542
Total Receivables as on June 30	Rs In Million	<u>92,423</u>	<u>106,943</u>
			105,443

Therefore 2% of the consumer's sales revenue is estimated for the provision for bad debts.

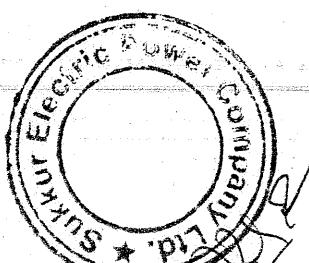

2.2.2 Depreciation:

The depreciation of assets is provided in accordance with the accounting policy of the Company.

2.2.3 Average Rate of Return (ROR):

The return on investment on the (cost of capital) will be calculated as follows:

$$\text{ROR} = \text{Profit Rate Base} \times \text{Rate of Return}$$

Tariff Petition Distribution Power FY 2018-19 & FY 2019-20 (MYT)

Where:

Profit Rate Base is defined for the FY 2018-19 & 2019-20 as the sum of (i) Gross Fixed Assets in Operation beginning of the year (ii) The capital expenditures for the year (New Investments), in accordance with the proposed investment programme (iii.) Less Cumulative Depreciation (iv) Plus Closing Capital Work in Progress (v) Less: Differed Credit.

Annual Rate of Return is a pre-tax return on the Profit Rate Base. Because the investment is typically financed with a combination of debt equity, the appropriate rate of return would be a market-based weighed average of the cost of capital.

- 2.2.4 Total Estimated Unit Sales** a schedule of the total unit sales (in kWh) of SEPCO across all customer categories is forecast for the FY 2018-19 & 2019-20. This forecast is used to determine the average distribution margin for Distribution Power per unit Rs.5.45/kWh for the F.Y 2019-20 needed to cover the revenue requirement expected for the year.

2.3 Inflation Adjustments:

The O&M component of the distribution margin is adjusted for expected inflation of control period.

2.4 Extraordinary Adjustments:

Any justified losses and/or additional expenses incurred by SEPCO due to changes in legislation month tariff adjustment determined but not notified, legal acts, technical regulation, or other special events that are beyond its control would be reimbursed by adjusting the Tariff, subject to NEPRA's approval:

3. CALCULATING SEPCO'S REVENUE REQUIREMENT:

3.1 Trends in Customers Numbers and Consumptions:

It is observed that domestic and life line consumers dominated the consumers number in SEPCO as per Annex-I. The subsidized categories generally outpaced others, which has been a major pressure on the tariffs.

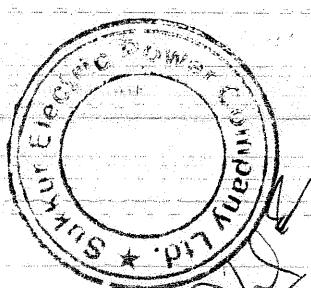

The increase in domestic consumption relative to industrial consumption i.e. sales mix is poor indicative for SEPCO's revenues and profitability. Meanwhile, industrial customers (the most profitable for SEPCO, as they are more economical to serve) are reducing their consumption (by installing captive generation) resulting in lower revenues for the Company.

3.2 Calculating SEPCO's Revenue Requirement:

Based on the tariff methodology described in the previous section, the average tariff for fiscal year F.Y 2019-20 has been calculated using the following parameters:

3.3.1 Total Unit Sales:

Unit Sales for FY 2018-19 is actual & FY 2019-20 is projected keeping in view the availability of electricity in the system and reduction in T&D Losses by (2.0)% from the last year actual losses i.e. 36.97%. The quarterly sales volume is actual & projected considering the seasonal effect keeping the overall target.

The cost of debts ; $k_d = 9.76\%$
